

Product EANs: xxxxxxxxxx

The compact NAPSC comes as standard with the NAC 282 preamplifier and it can also be used as an upgrade for the NAC 202 or to power the HeadLine headphone amplifier. It's a small but important link in the chain in extracting the highest levels of musical performance from these hi-fi components.

Controlling the power supply element of the system has been a mainstay of Naim Audio engineering since the early days. Just as paying close attention to every detail in design – no matter how small or seemingly insignificant it may seem – is one of the ways in which we ensure high quality musical performance.

The NAPSC power supply is an example of this philosophy in action. It comes as standard with the NAC 282 preamplifier, supplying smooth low-noise power for the digital circuitry, leaving the preamp to concentrate on doing its main job of managing the signal. When paired with the NAC 202 it does the same job by upgrading the existing internal power supply section to remove the electrically noisy work from the box entirely. In both applications this attention to detail reaps rewards in improved musical clarity and reduced noise.

Key Features

- 18V power output
- Bead-blasted, black-anodised aluminium chassis plus anti vibration feet
- Convenient and compact at just 12cm wide

Upgrades

Power-Line

POWER	
Mains Supply	100V - 120V, 220-240V; 50 or 60Hz
OUTPUTS	
Power Outputs	18V
PHYSICAL	
Dimensions	(HxWxD) 57 × 121 × 187 mm
Weight	2.1 kg
Shipping Weight	2.7 kg
Shipping Dimensions	110 × 250 × 330 mm
UPGRADES	
Other	Power-Line
FINISH	
Case	Black powder coated
Front	Black powder coated
